Give me a list of small skincare companies in Europe.

Based on the available information, here is a list of small skincare companies in Europe:

- 1. **Darphin**
  - Location: Paris, France (headquarters)
  - Size: Relatively small team, typical of a niche luxury brand
  - Details: Owned by Estée Lauder Companies (ELC), benefits from ELC's infrastructure but maintains its French heritage.

Unfortunately, the information provided does not include other small skincare companies in Europe. If you have specific criteria or need further details on Darphin, feel free to ask!

What's Darphin's environmental impact?

Based on the available information, here's an overview of Darphin's environmental impact:

Key Environmental Initiatives:

- 1. **Parent Company Commitments:** Darphin is owned by Estée Lauder Companies (ELC), which has set ambitious sustainability goals, including achieving net zero carbon emissions and using 100% renewable energy by 2030. While these goals apply to the broader company, specific metrics for Darphin are not publicly available.
- 2. **Packaging Sustainability:** Darphin focuses on sustainable packaging, incorporating recyclable glass and reducing plastic in some product lines. However, the brand has not yet adopted post-consumer recycled (PCR) materials at scale.
- 3. **Ingredient Sourcing:** Darphin emphasizes natural and botanical extracts in its formulations. While the brand does not hold significant USDA Organic or Ecocert certifications, it adheres to ELC's Responsible Sourcing Policy, which requires suppliers to meet environmental and social standards.

Challenges and Limitations:

- 1. **Lack of Transparency:** Third-party audits of Darphin's supply chain are not publicly available. The brand is also not listed in the Environmental Working Group (EWG) Skin Deep database, which assesses cosmetic ingredients for environmental and health impacts.
- 2. **Missing Metrics:** Concrete environmental metrics, such as water usage, waste reduction, or carbon footprint specific to Darphin, are not reported. This lack of transparency makes it difficult to fully evaluate the brand's environmental impact.
- 3. **Parent Company Aggregation:** Most of ELC's sustainability disclosures are aggregated at the corporate level, without detailed breakdowns for individual brands like Darphin.

Summary:

While Darphin promotes a "green philosophy" in its marketing and aligns with ELC's broader sustainability goals, there is limited transparency regarding brand-specific environmental metrics or third-party verification. The brand shows progress in sustainable packaging and ingredient sourcing but has room to improve in terms of reporting and certifications.

Do they have eco-friendly packaging?

Based on the information provided:

- Darphin focuses on sustainable packaging by incorporating recyclable glass and reducing plastic in some product lines.
- However, Darphin does not yet use post-consumer recycled (PCR) materials at scale, unlike some competitors.
- While Estée Lauder Companies (ELC) has pledged to make 75-100% of its packaging recyclable, refillable, reusable, or recoverable by 2025, Darphin's progress toward this goal is not independently verified.

If you're looking for brands with a stronger focus on eco-friendly packaging or transparency, you might want to consider other options.
