I want to simplify my skincare routine. Can you suggest a small, ethical brand that sells multi-use products?

To help simplify your skincare routine with small, ethical brands that offer multi-use products, here are three excellent options:

1. **The Ordinary:** Known for its minimalist approach and single-ingredient formulas, The Ordinary provides versatile products that target specific skin concerns without unnecessary additives. This brand is cruelty-free and offers a wide range of affordable options.
2. **Osea:** Specializing in seaweed-based skincare, Osea offers multi-use serums that can address various skin needs. Their focus on clean and sustainable practices makes them an eco-friendly choice with a smaller product lineup for simplicity.
3. **Pai Skincare:** This brand features facial oils designed to be used across different steps or concerns. Pai is committed to cruelty-free practices and uses natural ingredients, making their products both effective and ethical.

Each of these brands not only offers multi-use products but also aligns with ethical values such as sustainability, cruelty-free practices, and fair labor standards.

Does The Ordinary have a moisturizer with Sun Protection Factor?

The Ordinary does not currently offer a moisturizer with Sun Protection Factor (SPF). However, they do have a **UV Protectant 30% Zinc Oxide** product, which is a lightweight, non-greasy sunscreen. It provides broad-spectrum protection against UVA and UVB rays and can be used as part of your daily skincare routine to protect your skin from sun damage.

If you're looking for a moisturizer with SPF, The Ordinary's **UV Protectant 30% Zinc Oxide** is a great option that combines hydration (thanks to its squalane base) and sun protection in one step. This makes it perfect for simplifying your skincare routine while still protecting your skin.

Let me know if you'd like recommendations for other brands or products that combine moisturizing and SPF!

What are the active ingredients in The Ordinary's UV Protectant 30% Zinc Oxide?

The primary active ingredient in The Ordinary's UV Protectant 30% Zinc Oxide is zinc oxide, which provides broad-spectrum protection by reflecting UV rays away from the skin. This product is designed for simplicity and effectiveness, focusing on a minimal formulation with zinc oxide as its main active component. While it does not list additional active ingredients beyond zinc oxide, it effectively offers SPF 30 protection against both UVA and UVB rays. For precise details, consulting The Ordinary's official product information or website is recommended.
